

Category: Traffic and Public Transport

Project: City Rail Map – Find yourself, even offline!

What was the challenge?

The challenge was to create an easily understandable city map for large cities, allowing you to quickly and easily see where you are and how you can get from one place to another independently. This is especially true for first-time visitors in a city whose language or culture they are not familiar with. Our maps will show you the way.

What was the solution?

We decided to create a simple map showing major public transport routes, using small landmark icons as fixed points. Parks, rivers or mountains are shown as pattern areas that naturally limit urban space. Of particular focus were the important places such as transportation hubs or airports are often the entry and exit points on trips. You can also use placement markers to set your home or travel destination. It's a handy mobile app, enabling you to see the most direct route, possible transfers as well as travel time. Simply search for stations or locations, even when you're offline, such as when you are in the subway or have no network while abroad. This is available in all major languages and mobile devices.

What was the effect?

The City Rail Map app is loved by millions of users all over the world. Because the app is easy to use, it offers stress-free travel. In addition, there is an individual travel planner that you can share with friends and family. Each map has its very own layout where major geographical elements are shown to provide helpful information about the various means of transport. We have plans and projects for taking the app to the next level. We are now looking for partners who can help us make this possible so that one day we can provide City Rail Map for every urban location in the world.
